# Paper Prototype Assignment

Critical Areas
- Quiz Generation
- Adding Notes
- Notifications

Example Tasks
- Highlighting
- Taking the quiz
- Editing the quiz (choose what you want to study, ...)
- Notification setup (setting the exam date)

Notes from our meeting:
- The home page would be the calendar view that would have assignments and test dates to keep student information organized
- Each course would have a breakdown and preview of notes that you could edit or make a quiz out of that specific information
- The note taking application would be similar to most text editors except this one would have certain highlighters that would help the system determine what the important info to quiz you on. Like things that are keywords and concepts and their respective answers
- It would also be beneficial for students to upload a study guide if provided and use that as an easy way to get the most important info to a test in a couple clicks of a button
- The quizzing feature would be able to allow the student to set the limits of information, like is the test cumulative or just day 15 through 30
